DETERIORATING TRENCHLESS CONTRACTS IN NEED OF REHABILITATION

By Keynote Speaker

Ian Doherty, President and owner of Trenchless Design.

Overview: The last few years has seen expanding contractor frustration with specifications and inspection practices for a growing number of trenchless rehabilitation contracts. Preparing bids and executing the work is growing more difficult and costly because contract requirements are increasingly ambiguous or opaque. This problem leads to construction conflicts, inevitably heading towards litigation type outcomes. Long-term for owners this means either increasing cost or lower quality (or both) for trenchless rehabilitation work. The continually increasing volume of trenchless rehabilitation work is a cause (but not the only cause) for this deteriorating contracting environment as resources of both owners and engineering firms are stretched. The goal in this address is to highlight some causes of the problem and suggest useful approaches for tackling the problem.

Ian Doherty,—P. Eng., is the author of CIPP DESIGN, a computer application used by municipalities, contractors, engineers, and suppliers for the design of CIPP liners. Ian has over 38 years of industry experience and has been involved in the trenchless industry since 1988 and is currently a team member authoring the NASTT CIPP Best Practices Manual.
