

Title: Theoretical vs Actual Drive Forces – Developing Practical Predictive Models

Author: Kyle Verwey, Earth Boring Co.

Abstract: Follow-up to the 2015 Presentation - Assessment of modelling tools and field data to compare the calculated vs actual driving forces felt on the MTBM unit. This presentation underscores the importance of these calculations and the importance of a reliable analytical model to make better pipe material selections, MTBM equipment selection and fluids development in known soils conditions. This presentation will dive further into the model and how it relates to actual results acquired.
